

GEOXYGENE – 3D MODULE v1.6

INSTALLATION GUIDE

This document describes GeOxygene 3D (v1.6) executable installation (available since January the 23rd 2014, at following location : <http://oxygene-project.sourceforge.net>).

Download and unzip folder corresponding to the user operating system.

GeOxygene3D rendering relies on Java 3D library which must be downloaded from address below :

<https://java3d.java.net/binary-builds.html>

Please pay attention to download zip version matching with user operating system and processing unit type (for example : j3d-1_5_2-windows-i586.zip for Windows 32 bits...). Extract files from downloaded zip. Move following jar and dll files (usually located in *bin* and *bin\ext* folders) to GeOxygene 3D libraries folder (*exe\lib* from root).

- j3d-core-1.5.2.jar
- j3d-core-utils-1.5.2.jar
- vecmath-1.5.2.jar
- j3dcore-ogl.dll

Launch GeOxygene 3D module with *GeOxygene.bat* (GeOxygene 3D folder root).

If Java Virtual Machine heap space memory error happens, user is advised to open *geoxygene.bat* file with any text editor to modify following line, replacing *MaxPermSize* field by new allocated space memory (MB).

```
set JAVA_MAXMEM="-Xms1024m-Xmx1024m -XX:PermSize=256m -XX:MaxPermSize=256m"
```

Following line modification (from same file) enables to change language property ("en" variable).

```
set GEOX_OPTS="-Duser.language=en"
```

Optional : in order to use GeOxygene 3D in full capabilities, TetGen tetraedrisation must be downloaded from following location :

<http://wias-berlin.de/software/tetgen/#Download>

Use C compiler to produce binary files from source code and add it in same folder (*exe\lib*).
